SUMMARY

Data analyst trained in Excel, Power BI, SQL and Python, with a background in microbiology and quality control. Experienced in working with laboratory, batch and production records in feed manufacturing, and in structured digital data collection in the field. Completed a portfolio of Excel and Power BI projects, including a 14-table logistics capstone, covering data cleaning, modelling, DAX and interactive dashboards. Seeking a data analyst role where accurate, detail-driven work with data turns into clear insights for decision-making.

TECHNICAL SKILLS

Excel: Power Query, pivot tables and pivot charts, helper columns, interactive dashboards with slicers and KPI cards

Power BI: Power Query, data modelling and relationships, DAX measures, matrix drill-downs, interactive dashboards

Query and Programming: SQL (querying, joins, subqueries, aggregation)

Data Handling: Data cleaning and validation, data collection, record keeping, batch record management, spotting data quality issues

Soft Skills: Attention to detail, analytical thinking, written communication, documentation and reporting, teamwork

PROJECTS

Logistics Operations Dashboard | Power BI (TS Academy Capstone) 2026

- Modelled a 14-table relational logistics dataset covering drivers, trucks, loads, trips, fuel, maintenance and safety incidents
- Built DAX measures for eight analytical use cases, including driver performance, route profitability, fleet utilization and fuel efficiency
- Designed a four-page interactive dashboard, and found and documented a mismatch in the source data (fuel purchase trip IDs did not match trip records), then worked around it through truck IDs

AfriMart Sales and Profit Dashboard | Power BI, Power Query, DAX

- Combined multiple sheets in Power Query, fixed data types, removed blanks, checked for duplicates and validated calculations before modelling
- Built a date table and relationships, and wrote DAX measures for revenue, profit margin, year-on-year comparison and conditional KPI arrows
- Delivered an interactive dashboard with synced slicers, cross-filtering, drill-through, tooltips and page navigation to show revenue, profit and margins by country and product, and actual sales against projections

E-Commerce Sales Analytics | Power BI, Power Query, DAX

- Cleaned and transformed a 5,000-order CSV in Power Query, built a date table, and created a dashboard with KPI cards, slicers and drill-down visuals
- Found that card payments lead at 45.4% of orders, followed by cash on delivery at 35.5% and wallet at 19.1%, and that average delivery time is about 6.1 to 6.2 days across all four regions

ZoomRide Trip Analysis | SQL (MySQL) 2026

- Cleaned a 300-row ride-hailing trips table: fixed 12 inconsistent city spellings down to 6 cities, trimmed spaces and removed 2 duplicate trips
- Left 9 missing fares empty instead of guessing values, and analysed completed trips only to answer the manager's questions on top city, busiest month and top vehicle type

EXPERIENCE

Field Enumerator | Mastercard Foundation / ICED | *Abuja, Nigeria* Sep 2026

- Conducted structured participant interviews and captured responses with digital data collection tools
- Traced participants and managed schedules and follow-ups to complete interviews
- Obtained informed consent and reviewed each record for completeness before submission to protect data quality

Data Analytics Trainee | TS Academy | *Hooper Street, Birmingham* JUN 2026 - 0CT 2026

- Completed structured training in Data Analytics, developing practical skills in Excel, SQL, Power Query, and Power BI.
- Cleaned and transformed datasets for analysis.
- Built data models and created DAX measures.
- Developed interactive dashboards to monitor business performance.
- Applied analytical techniques to sales and logistics datasets.
- Presented findings through data visualisations and business insights.
- Applied these skills through hands-on projects, including sales performance analysis and a logistics operations dashboard.

EDUCATION AND TRAINING

Data Analytics Programme | TS Academy | *Remote* Jun 2026 - Oct 2026

- Training in Excel, Power BI, SQL and Python, covering data cleaning, modelling, dashboard design and data storytelling.

B.Sc. Microbiology (Second Class Honours) | Olabisi Onabanjo University | *Ago-Iwoye, Nigeria* 2024
